DATA SOURCES

Enderlin NG (in press). "Soils and agricultural land suitability of the Gilbert River - Chadshunt to Green Hills area". Department of Natural Resources and Mines, Queensland Government.
Property boundaries (Digital Cadastral Database, August 2017), watercourse and roads supplied by the Department of Natural Resources and Mines

MAP PRODUCTION

Neil Enderlin, Land Resource Assessment Unit, Queensland Department of Natural Resources and Mines, 28 Piers Street, Mareeba, October 2017

DISCLAIMER

This map has been derived from a soil and land suitability evaluation accurate to a scale of 1:100,000.

While every care is taken to ensure the accuracy of this product, the Department of Natural Resources and Mines makes no representations or warranties about its accuracy, reliability, completeness or suitability for any particular purposes and disclaims all responsibility and all liability (including without limitation, liability in negligence) for all expenses, losses, damages including indirect or consequential damage and costs which you might incur as a result of the product being inaccurate or incomplete in any way and for any reason.

Locality map

Suitability for irrigated cereal crops

- Land suitable (class 1-3) for at least 1 overhead spray irrigated irrigated cereal crop (39,309 ha)
- Unsuitable (class 4 or 5) land (62,071 ha)
- Non-agricultural land (6,475ha)

NOTES

- The agricultural suitability information shown on this map has been compiled from information collected by a low intensity (1:100,000 scale) soil survey and land evaluation suitable only for regional or local (Shire) planning purposes.
- Each unique map area (UMA) identifies crop type suitability for the dominant soil present. A UMA can contain sub-dominant soils that will have a different classification. UMAs mapped as arable land can include sub-dominant soil that is not suitable for cropping.
- The information depicted has been derived from from a suitability assessment of the subject land using the methodology set out in the "Guidelines for Agricultural Land Evaluation in Queensland (2nd edn)" Department of Science, Information, Technology and Innovation, and Department of Natural Resources and Mines, (2015).
- The classification has been determined from the assessment of the subject land for its suitability (class 1-5) for irrigated agricultural land uses. Rainfed or dry-land cropping suitability has not been assessed.
- The cereal crops assessed for suitability are overhead spray irrigated grain sorghum, maize and oats, grown during the wet or dry seasons. Please consult the associated suitability data base for the actual suitability class of each land use.
