## Main points

### Changes to reflect rebenchmarking of ABS Labour Force estimates to 2016 benchmarks

In the November 2017 ABS release of *Labour Force, Australia*, the labour force and unemployment estimates were rebenchmarked to preliminary Estimated Resident Population (ERP) figures based on the 2016 Census. This process resulted in revisions to the ABS' regional labour force and unemployment estimates from July 2011 onwards.

Due to the way in which the ABS figures are incorporated into the process used to create the SALM estimates, the Statistical Area Level 2 (SA2) and Local Government Area (LGA) figures have been revised from the September quarter 2011 onwards, both in this publication and the data tables available online.

Accordingly, it is not appropriate to compare data from the December quarter 2017 publication or data tables with figures from earlier releases. Users are instead advised to access the current December quarter 2017 data tables when undertaking any times series analysis relating to periods prior to those covered in this publication. The data tables are available online from the [SALM website](#).

### Changes to the geographic structure

In July 2017, the ABS released the 2017 LGA structure as part of the Australian Statistical Geography Standard (ASGS): Volume 3 – Non ABS Structures (ABS cat. no. 1270.0.55.003). Accordingly, the LGA estimates in the *Small Area Labour Markets* (SALM) publication from the June quarter 2017 release onwards are based on the 2017 LGA boundaries. Estimates for earlier quarters of data have been backcast, based on the 2017 LGA boundaries, to the December quarter 2010.

SALM estimates for ABS SA2s, on the other hand, will continue to be based on 2011 ASGS boundaries until the ABS begins disseminating regional data from its *Labour Force Survey* using the 2016 ASGS (see the Explanatory Notes on page 42 for more information on the use of ABS *Labour Force Survey* data in SALM).

### Estimates for Aurukun withheld

There are currently concerns that the SALM estimates for the SA2 and LGA of Aurukun may not be providing an accurate indication of labour market conditions within the region. Accordingly, the publication of figures for both the SA2 and LGA have been suspended while the issue is under investigation. Users are advised to avoid using previously published estimates for the SA2 and LGA of Aurukun.

### Introduction

SALM presents regional estimates of unemployment and the unemployment rate at two small area levels:

- For approximately 2,100 ABS SA2s, on a State/Territory and Metropolitan/Non-metropolitan basis, provided in Table 1. For the States, estimates for the Capital City and the Rest of State area are also provided; and
- For each of Australia's approximately 550 LGAs, provided in Table 2.

The estimates in Tables 1 and 2 are smoothed using a four-quarter average to minimise the variability inherent in small area estimates. A description of the methodology used to prepare the estimates in this publication is presented on page 42.

**Caution:** Highly disaggregated estimates of unemployment and the unemployment rate at the SA2 and LGA level can display significant variability and should be viewed with caution, particularly in regions where the SA4 level unemployment data that underpin the SALM estimates have been exhibiting considerable volatility. As a result, quarter-to-quarter comparisons may not be indicative of actual movements in the labour market. It is therefore recommended that year-on-year comparisons be used and that large movements in the SA2 and LGA data be viewed with caution.

### **Labour market developments at the SA2 level**

The December quarter 2017 SALM estimates show that more than half (55.2 per cent) of SA2s recorded a fall in their unemployment rate over the year to the December quarter 2017, down from 60.7 per cent over the year to the December quarter 2016. Large falls were recorded in Mandurah in Perth (down by 9.3 percentage points to 15.0 per cent), Morwell in Victoria (down by 5.4 percentage points to 15.6 per cent) and Bourke – Brewarrina in New South Wales (down by 5.2 percentage points to 4.1 per cent).

In the December quarter 2017, 53.5 per cent of SA2s recorded an unemployment rate of less than 5.0 per cent, up from 50.6 per cent in the December quarter 2016, while 10.8 per cent of SA2s recorded an unemployment rate of 10.0 per cent or above, down from 11.2 per cent in the December quarter 2016.

### **Labour market developments at the LGA level**

Unemployment has also decreased in the majority of LGAs, with 63.7 per cent having recorded a fall in their unemployment rate over the year to the December quarter 2017, up from 53.3 per cent over the year to the December quarter 2016. Large falls were recorded in Bourke (A) in New South Wales (down by 5.2 percentage points to 4.1 per cent), Narrogin (S) in Western Australia (down by 4.5 percentage points to 4.9 per cent) and Charters Towers (R) in Queensland (down by 3.2 percentage points to 11.1 per cent).

That said, a number of LGAs recorded a rise in their unemployment rate, with large increases recorded in Torres Strait Island (R) in Queensland (up by 6.2 percentage points to 34.8 per cent) and Clarence Valley (A) in New South Wales (up by 3.8 percentage points to 10.1 per cent).

In the December quarter 2017, 52.0 per cent of LGAs recorded an unemployment rate of less than 5.0 per cent, compared with 40.0 per cent in the December quarter 2016, while 8.9 per cent of LGAs recorded an unemployment rate of 10.0 per cent or

above, down from 11.4 per cent in the December quarter 2016.

Significant differences exist at the State level, with 65.0 per cent of LGAs in Western Australia recording an unemployment rate below 5.0 per cent, compared with just 20.8 per cent in Queensland.

### **Next issue**

It is anticipated that the March quarter 2018 issue of SALM will be released in June 2018.

### **Contact details**

This report was prepared by the Labour Market Analysis and Advice Section within the Labour Market Research and Analysis Branch. For further information, please contact Joel Meehan on (02) 6240 5358, or email the [SALM inbox](#).

\* Due to the small size of the labour force, particular care should be exercised when interpreting these estimates.

\*\* There are currently concerns that the SALM estimates for the SA2 of Aurukun may not be providing an accurate indication of labour market conditions within the region. Accordingly, the publication of figures for the SA2 will be suspended while the issue is under investigation. Users are therefore advised to avoid using previously published estimates for the SA2 of Aurukun.

\* Due to the small size of the labour force, particular care should be exercised when interpreting these estimates.

\*\* There are currently concerns that the SALM estimates for the LGA of Aurukun may not be providing an accurate indication of labour market conditions within the region. Accordingly, the publication of figures for the LGA will be suspended while the issue is under investigation. Users are therefore advised to avoid using previously published estimates for the LGA of Aurukun.

\*\*\* The ACT is not divided into separate LGAs. The total for the Territory has been included for comparative purposes.

## Explanatory notes

### Structure of regional estimates in Tables 1 and 2

State/Territory data by Statistical Area Level 2 (SA2) and Local Government Area (LGA) are presented in Tables 1 and 2 respectively. For the States, estimates for the Capital City and the Rest of State area are also presented in Table 1. There are around 2,200 SA2s (2,090 of which are published) and 550 LGAs in Australia. The SA2s are a geographical unit in the Australian Bureau of Statistics' (ABS) 2011 Australian Statistical Geography Standard (ASGS), upon which the ABS Labour Force Survey data are based. The SA2 estimates are then concorded to the LGA level in Table 2 using population weights based on the latest available LGA concordance from the ABS.

### Methodology

The estimates in Tables 1 and 2 are based on the Structure Preserving Estimation (SPREE) methodology, which enables the generation of small area unemployment, unemployment rate and labour force estimates. Given the level of disaggregation involved, the data are smoothed and averaged over four quarters to dampen the variability inherent in the small area estimates.

The estimates presented in Table 1 and 2 are derived from three primary data sources:

1. Current recipients of Youth Allowance (other) and current recipients of Newstart Allowance who are not on a zero rate of payment, by SA2;
2. ABS *Labour Force Survey* data by ABS Statistical Area Level 4 (SA4). The ABS *Labour Force Survey* samples private and non-private dwellings (approximately 26,000 households) across Australia and covers about 0.32 per cent of the population. More details about the methodology underpinning this survey are included in the ABS publication *Labour Force, Australia* (cat. no. 6202.0); and
3. 2011 Census of Population and Housing participation rate data at the SA2 level.

The purpose of SPREE is to produce small area labour market estimates that reflect the regional disparities of the Centrelink data, while being consistent with the ABS *Labour Force Survey* estimates.

Unemployment estimates are produced by apportioning the level of unemployment at the SA4 level, as published by the ABS, across each of the SA2s within that region in accordance with the distribution of Centrelink Newstart and Youth Allowance (other) beneficiaries, benchmarked by ABS unemployment estimates by age, sex and marital status at the Greater Capital City Statistical Area (GCCSA) level.

Labour force estimates are produced by:

- taking the participation rate for each SA2 from the 2011 Census (in instances where an SA2 does not have a participation rate, the participation rate for the SA3 was used as a proxy);
- applying this to the latest available ABS estimated resident population (ERP) data for persons aged 15 and over for the SA2, to produce a labour force weighting for the SA2 within the SA4; and then
- allocating the total labour force for each ABS SA4 to the SA2s within that region according to the labour force weighting.

By using Census participation rates and the latest available ERP, the SA2 labour force estimates are able to adjust to changes in the distribution of population within an SA4 since the 2011 Census.

Unemployment rate estimates are produced by calculating the level of unemployment as a proportion of the labour force (consistent with ABS methodology).

As the reliability of estimates at the SA2 level are related to the size of the SA2, estimates are only published if they had a labour force of 100 or more

as at the December quarter 2013. In addition, caution should still be exercised for SA2s or LGAs with a labour force of less than 1,000.

Due to both the methodology used and the significantly higher variability of the data disaggregated below the SA2 or LGA level, it is not possible to derive reliable unemployment and unemployment rate estimates for particular groups (ie; males, females, youth) within an SA2 or LGA.

#### **Derivation of employment estimates**

The data in Tables 1 and 2 in this publication are synthetic estimates based on ABS and Centrelink unemployment numbers and labour force data from the 2011 Census. Accordingly, employment estimates should not be derived from these statistics. For more information, please email the [SALM inbox](#).

#### **Other sources of information**

This publication, as well as data files in Excel format containing estimates back to the December quarter 2010, can be downloaded from the [SALM website](#).

#### **Unsmoothed Series**

The smoothed estimates presented in Table 1 and 2 are the Department's official estimates of unemployment and the unemployment rate at the SA2 and LGA level. However, it is recognised that some advanced users may need access to the unsmoothed estimates which are used to produce the official figures. They are available on the [SALM website](#) under the explanatory notes section.
